# KEY FEATURES

## SARS-CoV-2

Reduces viral load of HCoV-229E by up to **99.87%** & SARS-CoV-2 by up to **97.4%**

ISO 21702:2019

## Easy Install and Removal

Industry leading self adhesive backing for easy install and removal.

## KILLS GERMS

Reduces microbial growth of \*bacteria by up to **99.99%**.

ISO 22196

1

YEAR

## Long Term Protection

Three layers of durable materials offering long term protection.

# VERACO SAFE PAD™

## Product Details.

UPC: 0001

Category: Safe Pad

- ✓ Up to 99.87% effective against Human Coronavirus HCoV-229E
- ✓ Up to 97.4% effective against SARS-CoV-2
- ✓ Reduces microbial growth of bacteria by up to 99.99%
- ✓ Industry leading self adhesive backing for easy and secure install
- ✓ Easy to remove!
- ✓ Lasts up to 1 year

Push doors are a common feature of modern day life. We see them nearly everywhere!

Install the Veraco Safe Pad™ to any push door for a cleaner and safer environment. Just simply use the self adhesive backing to position securely on any surface.

The product can be cleaned by most conventional cleaning methods. For more information please refer to our cleaning manual.

# DID YOU KNOW?

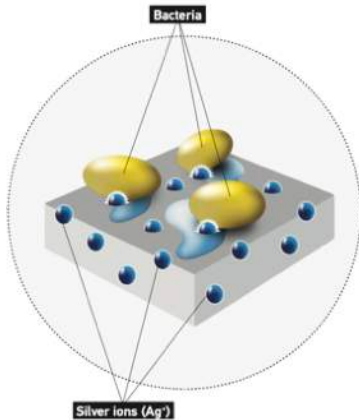

ONE GERM  
CAN MULTIPLY INTO  
8 MILLION IN JUST ONE DAY

# HOW IT WORKS

# HOW IT WORKS

As silver ion antimicrobial technology has one of the widest ranges of use, it can be perfect for a variety of products. Silver technology prevents microorganisms from spreading by stopping contamination and growth through four processes.

## 1 Cell Membrane Damage

By damaging a microorganism's cell membrane, silver ion technology compromises its structural integrity, causing nutrients to leak out and, eventually, causing the cell membrane to burst – killing the cell.

## 2 Protein Damage

Protein is an essential element for biological systems to live. Silver ions cause a failure of the cell's crucial functions, like energy production, by damaging the microorganism's protein. This damage to the cell's protein means that it cannot replicate and grow.

## 3 DNA Interference

Silver ion technology blocks the copying of a cell's DNA by disrupting its genetic material. By doing this, the cell is unable to replicate itself and spread.

## 4 Oxidative Damage

The presence of the silver ions in the cell cause increased levels of reactive oxygen, which damages the microbe's internal system.

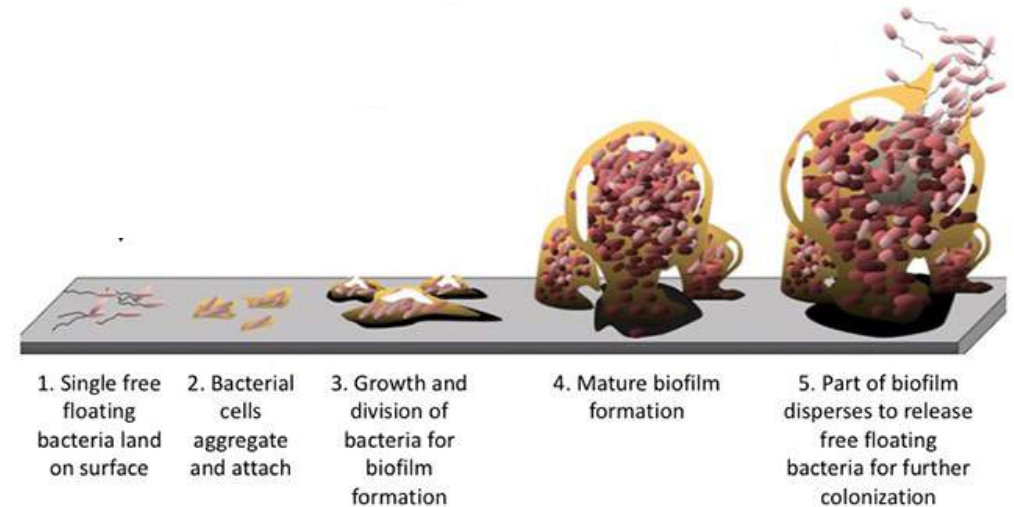

# THE IMPORTANCE OF SURFACE HYGIENE

Bacteria – including E. Coli and MRSA – can survive for several months on inanimate surfaces.

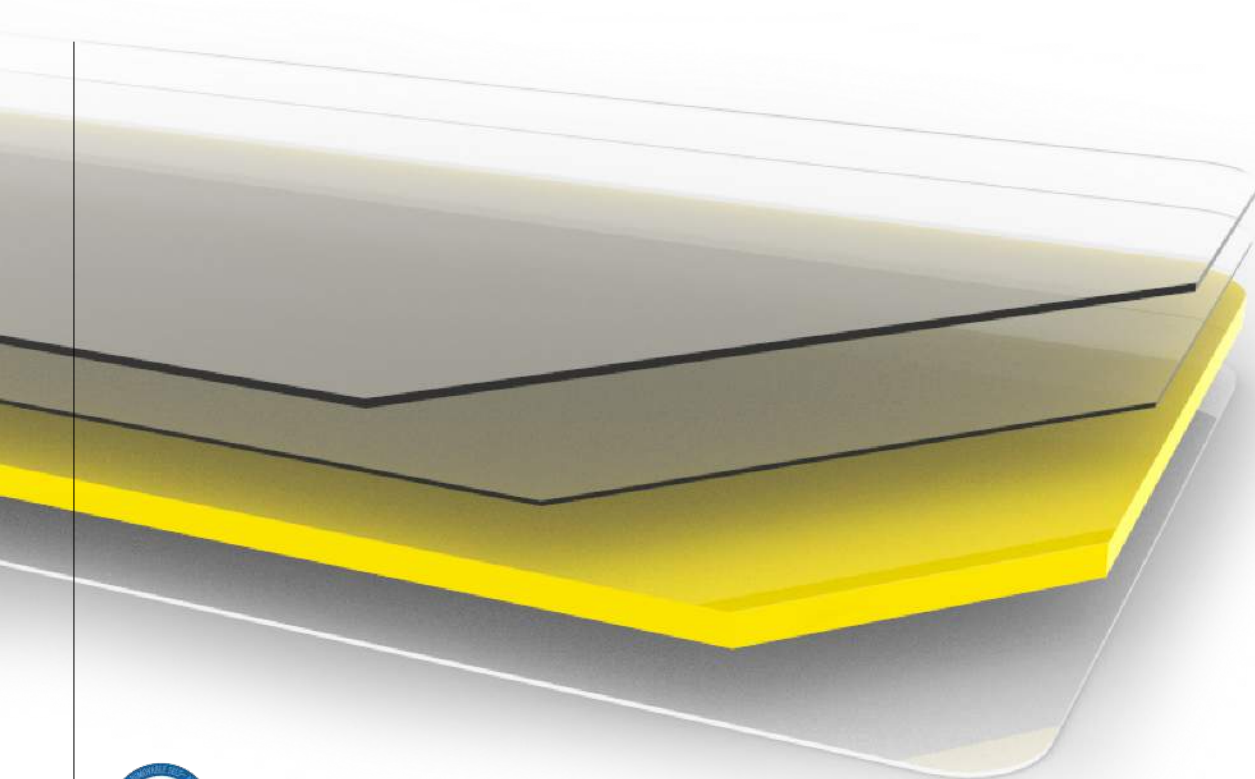

Bacteria grows very quickly and if given the time will also rapidly multiply and mature into what is called a BioFilm.

BioFilms can be **1,000 X more resistant** to disinfectants than bacteria found outside of biofilms.

We use a Silver Ion technology that work 24/7 when cleaning doesn't. This **prevents the formation of biofilms.**

**Self adhesive backing for easy install**

**Last up to 1 year**

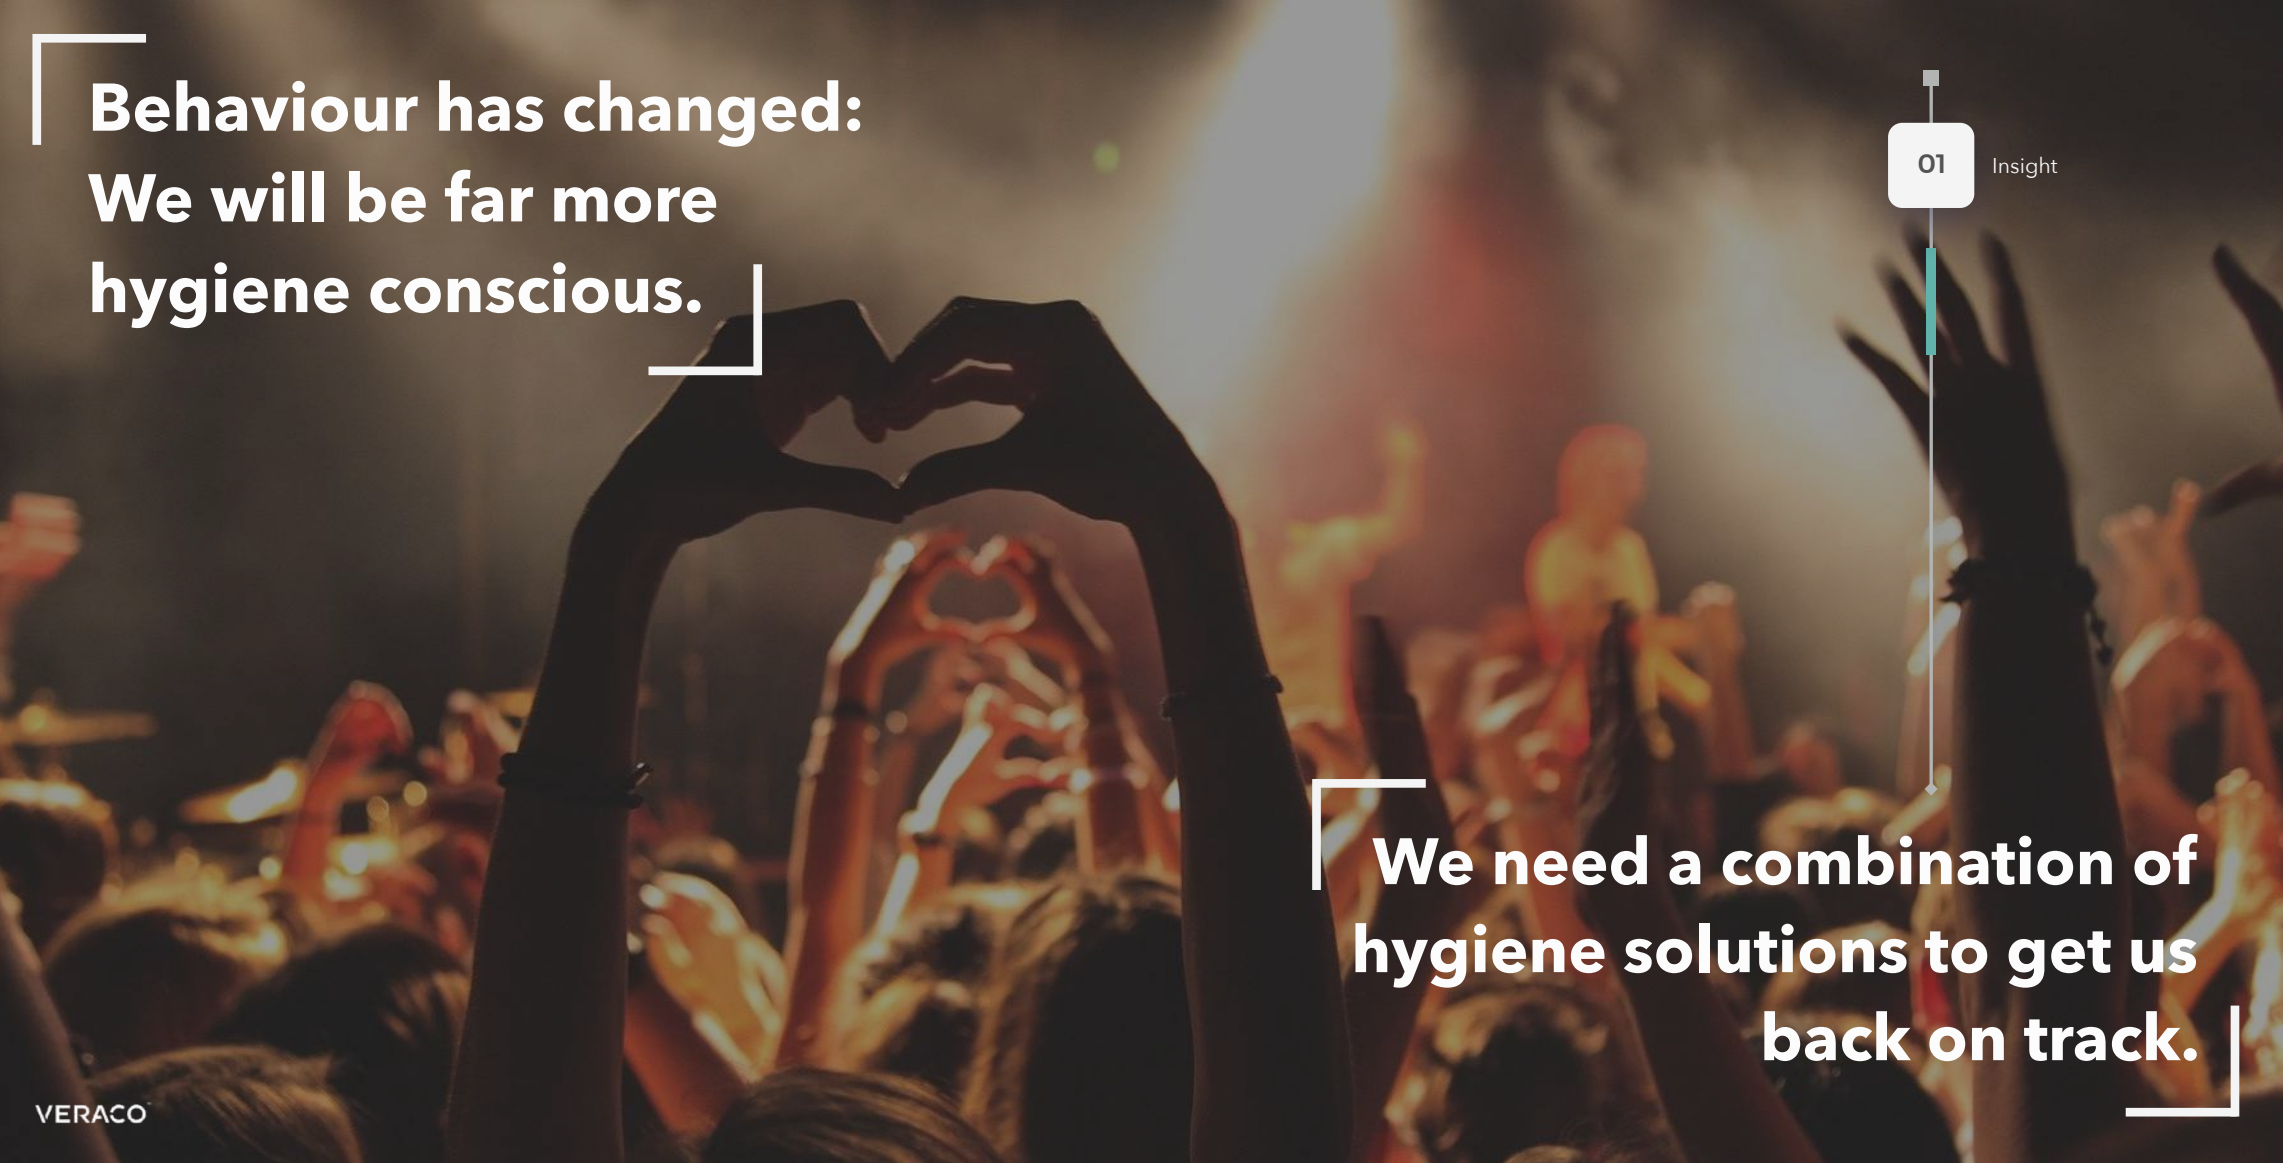

**ISO CERTIFIED - protecting you from bacteria and viruses including SARS-CoV-2**

## PRODUCT

1. Visible In Design
2. Lightweight
3. Durable In Material
4. Easy To Install

**Behaviour has changed:  
We will be far more  
hygiene conscious.**

H

VERACO

VERACO

We were approached by Veraco in the latter part of last year, regarding an all new product that suited our needs perfectly.

As a Premier League Football Club battling Coronavirus, hygiene is of upmost importance, ensuring our Red Zone on matchdays is sterile in order to safely accomodate everyone, ranging from both home and away squads, plus numerous staff and officials from competitions such as the Premier League and FA Cup.

Furthermore, given the secure nature of our training ground, and the importance of keeping surfaces clean and germ free, the range of safe plates, pads, wraps and handles provides an extra layer of protection, crucial given the ferocious spread of COVID-19 that we have all seen in recent weeks.

VERACO even came up with a custom door release sticker for many of the doors at the training ground, helping to create a bespoke product to cater for our exact needs.

A massive thank you to Harrison (Sales Manager) for all of his help and time in delivering a great product.

Stuart Jones

Health and Safety Co-ordinator. Wolverhampton Wanderers FC

**Crisis**

**Together  
we will end  
homelessness**

# OUR PURPOSE

## SUPPORTING CRISIS

We are proud to announce our partnership with Crisis, the national charity for people who are homeless or at risk of becoming homeless and who campaign for the changes needed to solve it altogether.

The homeless community has been hit incredibly hard by the pandemic so we've partnered with Crisis to fight homelessness & change lives. We are donating our products to key community centres managed by Crisis as well as being involved in future campaign partnerships.

**Together  
we will end  
homelessness**
