

Scantronic security systems Eaton SecureConnect™ cloud communicators

Why choose Eaton SecureConnect™ cloud communicators?

With Eaton SecureConnect™ enabled panels, installers are able to quickly establish a connection to the free to use Eaton SecureConnect app and cloud service via a wired ethernet. All SecureConnect enabled panel include a panel built-in Ethernet port allowing for simple wired connections to a router straight out of the box.

For greater flexibility Eaton also offers a range of alternative communicators including wire-free options of Wi-Fi and Mobile network connections. Whether you wish to be independent from the router or have a back up path, numerous options are available at cost effective prices.

COM-DATA-4G-SD

- Secure connectivity over a mobile network with automatic switching between 4G, 3G or 2G for the strongest signal
- Combine with an Ethernet connection to provide Dual path connectivity to Eaton SecureConnect
- Speech and SMS support via 4G (VoLTE) technology

COM-DATA-WIFI

- Secure connectivity over a Wi-Fi network
- Quick and easy setup to the Wi-Fi router, including WPS
- Users are able to easily reset router password

COM-DATA-4G-WIFI

- Secure connectivity over both Wi-Fi and mobile networks
- Dual path connectivity to Eaton SecureConnect™
- Can be used as Wi-Fi only or Mobile only making it one module for all installations

Powering Business Worldwide

Which network and module is most suited to you?

Connecting the panels built-in Ethernet port to the router is the simplest and most cost effective option for connectivity. No need to purchase additional devices to access the free to use SecureConnect app and cloud service.

If you wish to be independent from the customers infrastructure or need to establish a temporary connection for one of your installations, the COM-DATA-4G-SD is the perfect solution. If you want to make the connection to SecureConnect more resilient, combine the Ethernet connection with the COM-DATA-4G-SD to provide dual path connectivity.

Remove the need to run a cable to the router by fitting the COM-DATA-WIFI, allowing a connection to a router to be established in seconds via a password or WPS. Flexible menu options even allow users to update network passwords should the router be replaced or network passwords changed.

Achieve a resilient connection with the least possible effort, combining the technology of the COM-DATA-4G-SD and COM-DATA-WIFI means that the COM-DATA-4G-WIFI can offer dual path connectivity without the need for a cabled connection. Both paths can be set up within minutes and the panel will automatically switch between both paths to maintain the highest level of connectivity.

In addition to Cloud connectivity, the COM-DATA-4G-SD also supports ARC reporting, Speech, and SMS. ARC reporting supports multiple formats including FF, CID, SIA. SMS functionality provides up to four contacts with a variety of status messages and Speech feature allows up to four personalised voice messages.
