## ILLUMINATED CODED KEYPAD

The CS109 are combined door entry and coded access systems utilizing a panel mounted stainless steel keypad. The system has an independent, secure controller and therefore can be considered when a high level of security is necessary. It is available from a single station system up to any number of telephone stations. However, the keypad feature is available on any of our door entry systems and can be included with vandal resistant VRP, Video and LCP style panels.
