# EMERGENCY EXIT BUTTON

SP80/SR

Surface or flush  
Vandal Resistant  
Emergency Push  
to Exit switch.

The SP80/SR is a stainless steel surface or flush mount push to exit switch with embossed yellow halo to aid visually impaired users.

Designed to fit a standard UK single gang electrical box the switch is also engraved with 'PUSH TO EXIT' in green and instructions for use in an emergency in red. The large tactile switch includes a push to make and push to break circuit. Both circuits are used together to offer a fail-safe solution should the control equipment the switch is connected to fail or becomes compromised.

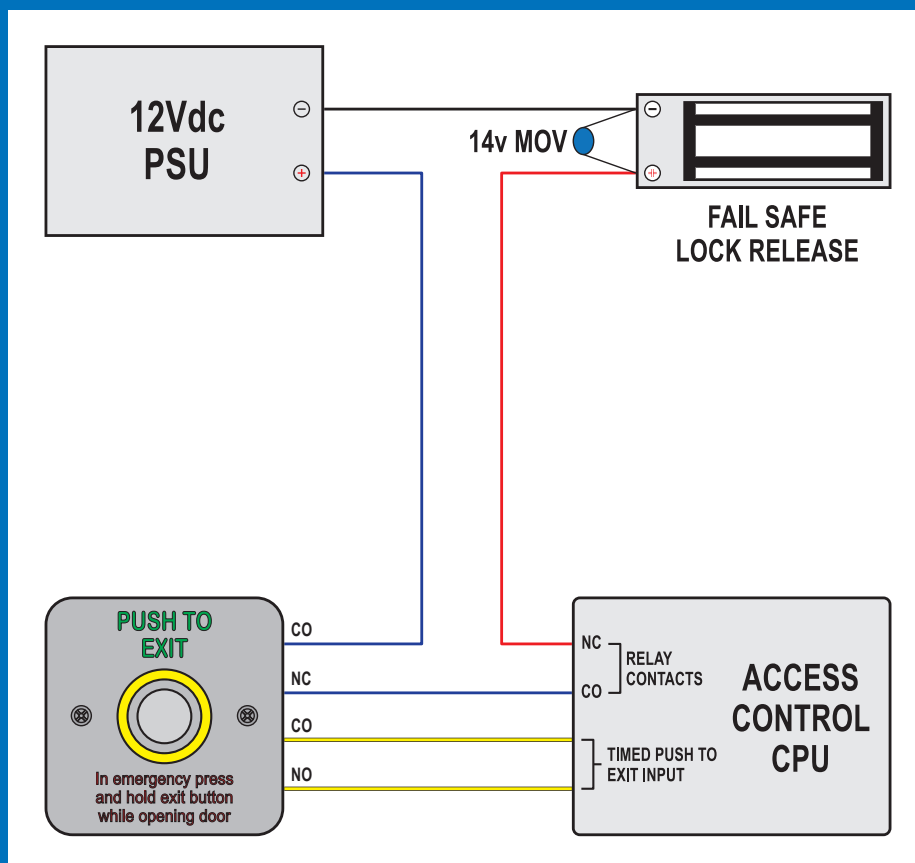

The normally open circuit would be used to trigger control equipment for a timed exit from the building holding the doors open/unlocked for the time programmed on the control equipment. The normally closed circuit will control the power to the lock directly breaking power to the fail-safe lock momentarily while the switch is pressed.

This solution could be used in environments where a standard green break glass can't be used due to constant misuse.
